# Group Project – Collaborating with Overleaf

Introduction to Data Science and Machine Learning [DSML]

Overleaf

- to collaborate in Overleaf using the "Collaborators"-function, one user needs a premium account

- there is, however, a second option for sharing: using a public link

- for this, one group member needs to create the project
  - create a free account
  - open the template from [here](#)

- this 'owner' can then share the link with the rest of the group
  - click on "Share" in the upper right
  - in the pop-up window, click on "Turn on link sharing"

IS3 Thesis & Seminar Official Template   Review   Share   Submit

Share Project

Link sharing is off, only invited users can view this project. Turn on link sharing

kuhmann@wiso.uni-koeln.de   Owner

Share with your collaborators

joe@example.com, sue@example.com, ...

Can Edit   Share

Close

After turning on link sharing, the public link for editing can be sent to the team members (who also need a free Overleaf account)
